Assignment 3 | 7th August 2021

Question 1

Write a program to perform insertion of elements from beginning in a linked list.

Program :

```
#include<iostream>
```

```
using namespace std;
```

```
struct Node
```

```
{
```

```
    int data;
```

```
    Node *next;
```

```
};
```

```
Node * create(int);
```

```
Node * insert_begin(Node *, int);
```

```
void display_list(Node *head);
```

```
Node *create(int item) //Creation of Node
```

```
{
```

```
    Node * nptr = new Node;
```

```
    nptr -> data = item;
```

```
    nptr -> next = NULL;
```

```
    return nptr;
```

```
}
```

```
int main()
```

```
{
```

```
    Node * head = NULL;
```

```
    head = insert_begin(head, 10);
```

```
    head = insert_begin(head, 20);
```

```

    head = insert_begin(head, 30);
    head = insert_begin(head, 40);

    display_list(head);

    return 0;
}

Node * insert_begin(Node *head, int data)
{
    Node *np = create(data);
    if(!head)
    {
        head = np;
        return head;
    }
    np -> next = head;
    head = np;
    return head;
}

void display_list(Node *head) //Displaying Linked List
{
    if(!head)
    {
        cout << "List is Empty!!!" << endl;
        return;
    }
    Node *temp = head;
    cout << "Elements in the list when they are inserted from beginning are:- " << endl;
    while(temp != NULL)
    {
        cout << temp -> data << " ";
        temp = temp -> next;
    }
}

```

Output :

```
"C:\Users\Advait\Downloads\Assignment 3- Insert from beginning.exe"
Elements in the list when they are inserted from beginning are:-
40 30 20 10
Process returned 0 (0x0)   execution time : 7.366 s
Press any key to continue.
```

Question 2

Write a program to perform insertion of elements from ending in a linked list.

Program :

```
#include<iostream>
using namespace std;
struct Node
{
    int data;
    Node *next;
};
Node * create(int);
Node * insert_end(Node *, int);
void display_list(Node *head);
Node *create(int item) //Creation of Node
{
    Node * nptr = new Node;
    nptr -> data = item;
    nptr -> next = NULL;
    return nptr;
}
int main()
{
```

```

Node * head = NULL;
head = insert_end(head, 10);
head = insert_end(head, 20);
head = insert_end(head, 30);
head = insert_end(head, 40);
display_list(head);
return 0;
}

Node * insert_end(Node *head, int data)
{
    Node *ptr=create(data);
    Node *temp=head;
    if(head==NULL)
    {
        head=ptr;
        return head;
    }
    while(temp->next!=NULL)
    {
        temp=temp->next;
    }
    temp->next=ptr;
    return head;
}

void display_list(Node *head) //Displaying Linked List
{
    if(!head)
    {
        cout << "List is Empty!!!" << endl;
        return;
    }
    Node *temp = head;
    cout << "Elements in the list when they are inserted from ending are:- " << endl;
    while(temp != NULL)
    {
        cout << temp -> data<< " ";
        temp = temp -> next;
    }
}

```

```
"C:\Users\Advait\Downloads\Assignment 3- Insert from ending.exe"
Elements in the list when they are inserted from ending are:-
10 20 30 40
Process returned 0 (0x0)   execution time : 7.092 s
Press any key to continue.
```

Question 3

Write a program to perform deletion of elements from ending in a linked list.

Program :

```
#include<iostream>
```

```
using namespace std;
```

```
struct Node
```

```
{
```

```
    int data;
```

```
    Node *next;
```

```
};
```

```
Node * create(int);
```

```
Node * insert_end(Node *, int);
```

```
Node * Delete_from_end(Node *,int);
```

```
void display_list(Node *head);
```

```
void display_list_after_delete_from_end(Node *head);
```

```
Node *create(int item) //Creation of Node
```

```
{
```

```
    Node * nptr = new Node;
```

```
    nptr -> data = item;
```

```
    nptr -> next = NULL;
```

```
    return nptr;
```

```
}
```

```
int main()
```

```
{
```

```
    Node * head = NULL;
```

```
head = insert_end(head, 10);
```

```
head = insert_end(head, 20);
```

```
head = insert_end(head, 30);
```

```
head = insert_end(head, 40);
```

```
display_list(head);
```

```
display_list_after_delete_from_end(head);
```

```
return 0;
```

```
}
```

```
Node * insert_end(Node *head, int data)
```

```
{
```

```
Node *ptr=create(data);
```

```
Node *temp=head;
```

```
if(head==NULL)
```

```
{
```

```
head=ptr;
```

```
return head;
```

```
}
```

```
while(temp->next!=NULL)
```

```
{
```

```
temp=temp->next;
```

```
}
```

```
temp->next=ptr;
```

```
return head;
```

```
}
```

```
void display_list(Node *head) //Displaying Linked List
```

```
{
```

```
if(!head)
```

```
{
```

```
cout << "List is Empty!!!" << endl;
```

```
return;
```

```
}
```

```
Node *temp = head;
```

```
cout << "Elements in the list before deleting are:- " << endl;
```

```
while(temp != NULL)
```

```
{
```

```
cout << temp -> data<< " ";
```

```
temp = temp -> next;
```

```
}
```

```
}
```

```
Node *Delete_from_end(Node *head)
```

```
{
```

```
Node *temp=head;
```

```
if(head==NULL)
```

```
{
```

```
cout<<"The list is already empty.";
```

```
return head;
```

```
}
```

```
if(head->next==NULL)
```

```
{
```

```
delete head;
```

```
return NULL;
```

```
}
```

```
while(temp->next->next!=NULL)
```

```
{
```

```
temp=temp->next;
```

```
}
```

```
temp->next=NULL;
```

```
return head;
```

```
}
```

```
void display_list_after_delete_from_end(Node *head)
```

```
{
```

```
Node *temp=head;
```

```
int count=0;
```

```
if(temp==NULL)
```

```
{
```

```
cout<<"The list is empty.";
```

```
}
```

```
cout<<"\nThe elements of the list after deleting from end are:"<<endl;
```

```
while(temp->next)
```

```
{
```

```
cout<<temp->data<<" ";
```

```
temp=temp->next;
```

```
}
```

```
}
```

Output:

```
"C:\Users\Advait\Downloads\Assignment 3- deletion from ending.exe"
Elements in the list before deleting are:-
10 20 30 40
The elements of the list after deleting from end are:
10 20 30
Process returned 0 (0x0)   execution time : 0.038 s
Press any key to continue.
```

Question 4

Write a program to perform deletion of elements from beginning in a linked list.

Program :

```
#include <iostream>
#include<stdlib.h>
using namespace std;

struct Node
{
    int Data;
    Node *next;
};

Node *create(int Data)
{
```

```
Node *nptr=new(Node);  
nptr->Data=Data;  
nptr->next=NULL;  
return nptr;  
}
```

```
Node *insert_beg(Node *head, int x)  
{  
    Node *pt=create(x);  
    if(head==NULL)  
    {  
        head=pt;  
        return head;  
    }  
    pt->next=head;  
    head= pt;  
    return head;  
}
```

```
Node *Delete_from_beginning(Node *head)  
{  
    Node *newhead=NULL;  
    if(head==NULL)  
    {  
        cout<<"Nothing to Delete. The list is already empty.";  
        return head;  
    }  
    else  
    {  
        newhead=head->next;  
        delete(head);  
    }  
    return newhead;  
}
```

```
void display(Node *head)  
{
```

```

    Node *temp=head;
    int count=0;
    if(temp==NULL)
    {
        cout<<"The list is empty.";
    }
    cout<<"The elements of the list are:"<<endl;
    while(temp!=NULL)
    {
        cout<<temp->Data<< " ";
        temp=temp->next;
    }
}

int main()
{
    Node *head, *temp;
    head= NULL;
    head=insert_beg(head,40);
    head=insert_beg(head,50);
    head=insert_beg(head,60);
    head=insert_beg(head,70);;
    head=insert_beg(head,80);
    display(head);
    cout<<"\n After deleting from beginning ";
    head=Delete_from_beginning(head);
    display(head);

    return 0;
}

```

Output:

```
"C:\Users\Advait\Downloads\Assignment 3- deletion from beginning.exe"
The elements of the list are:
80 70 60 50 40
After deleting from beginning The elements of the list are:
70 60 50 40
Process returned 0 (0x0)   execution time : 5.288 s
Press any key to continue.
```
